

Rajeev Ranjan

SITE RELIABILITY ENGINEER | DEVOPS ENGINEER

+91 8971352338 | rajeevranjan456@gmail.com | <https://www.linkedin.com/in/rajeev-ranjan-39008590/>

Professional Summary

Results-driven DevOps Engineer / Site Reliability Engineer with 7+ years of experience designing, automating, and managing scalable cloud-native infrastructure and CI/CD platforms in enterprise environments. Expertise in Kubernetes, Docker, AWS, GCP, Terraform, Ansible, Jenkins, Grafana, ELK Stack, and infrastructure automation. Proven ability to build highly available systems, optimize cloud infrastructure costs, implement monitoring and alerting solutions, and improve deployment efficiency through DevOps best practices. Strong experience in CI/CD pipeline automation, Infrastructure as Code (IaC), incident management, observability, and cross-functional collaboration.

Technical Skills

- **Cloud & Infrastructure:** AWS (EC2, IAM, VPC, CloudWatch, ECR, EKS), Google Cloud Platform (GCP, GKE, Istio), Docker
- **CI/CD & Automation:** Jenkins, Spinnaker, CI/CD Pipeline Automation, Git, GitHub, Blue-Green Deployments, Canary Deployments, GitHub Actions
- **Infrastructure as Code (IaC):** Terraform, Ansible, Terraform Modules, Infrastructure Provisioning, Remote State Management
- **Monitoring, Logging & Alerting:** Prometheus, Grafana, ELK Stack, Kibana, PagerDuty, Go-Aalert
- **Scripting & Programming:** Bash Scripting, YAML, Python
- **DevOps & Reliability:** Incident Management, SLI/SLO Implementation, Chaos Engineering, Capacity Planning, Root Cause Analysis (RCA), High Availability & Scalability, Observability
- **Kubernetes:** GKE, Helm, Ingress Controllers, RBAC, Network Policies, HPA, Service Mesh
- **Operating Systems:** Linux (RHEL, Ubuntu, CentOS)

PROFESSIONAL EXPERIENCE

Site Reliability Engineer | Lowe's Services India Pvt. Ltd., Bangalore

2017 – Present

- Designed, implemented, and maintained enterprise-grade CI/CD pipelines using Jenkins, Kubernetes, Docker, and Spinnaker, reducing deployment time by 40% and accelerating software release cycles across multiple production environments.
- Automated cloud infrastructure provisioning and configuration management using Terraform and Ansible, improving infrastructure consistency and reducing manual provisioning efforts by 60%.
- Managed 150+ Kubernetes workloads across AWS and GCP supporting enterprise e-commerce platforms with 99.9% availability and serving millions of customer transactions annually.
- Administered Kubernetes and Docker container orchestration environments, improving application scalability, deployment stability, and resource utilization efficiency.
- Implemented centralized monitoring, logging, and alerting solutions using Grafana, Prometheus, ELK Stack, and Kibana, enabling proactive issue detection and reducing critical incident response times by 35%.
- Developed automation scripts using Python and Bash scripting to streamline operational workflows, automate repetitive tasks, and improve engineering productivity.
- Integrated DevSecOps best practices into CI/CD workflows by enforcing secure deployment standards, infrastructure hardening, and automated operational compliance checks.
- Partnered with development, QA, and operations teams to troubleshoot complex production incidents, optimize deployment workflows, and improve service reliability across distributed cloud-native environments.

- Led incident response management and on-call support using PagerDuty and Go-Alert, significantly reducing Mean Time to Resolution (MTTR) and minimizing production downtime.
- Conducted root cause analysis (RCA) and blameless postmortems for critical production incidents, driving continuous improvement initiatives and long-term system reliability enhancements.
- Implemented SLI/SLO frameworks to monitor service reliability metrics and ensure alignment with business objectives and customer experience expectations.
- Reduced annual cloud spend by 30% through rightsizing, autoscaling, infrastructure optimization, and capacity planning initiatives.

iOS Developer | Adeptpros IT Solutions Pvt. Ltd

Apr 2015 – Apr 2017

- Developed and maintained enterprise-grade iOS applications using Swift, Objective-C, and Xcode for IoT and consumer-focused solutions.
- Integrated RESTful APIs, analytics tools, and backend services to improve application functionality and user experience.
- Optimized application performance and stability, reducing crash rates and improving application responsiveness.
- Managed App Store deployments, release management, and production support activities.

KEY ACHIEVEMENTS

- Reduced cloud infrastructure costs by 30% through optimization and capacity planning.
- Improved deployment speed by 40% through CI/CD automation.
- Achieved 99.9% platform availability across production environments.
- Reduced MTTR by 35% through observability and proactive monitoring initiatives.

CERTIFICATIONS

- Certified Kubernetes Administrator (CKA)
- Certified Terraform Associate
- Certified Ansible Associate

EDUCATION

Bachelor of Technology (B. Tech) – Electronics & Communication Engineering
Dewan V.S. Institute of Engineering & Technology, Meerut
